WrapTec®

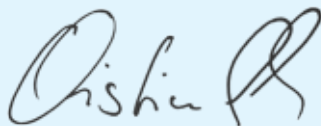

**Self-welding.
Watertight.
Weatherproof.**

Airtightness classification of ventilation systems

When using **WrapTec** on insulated round pipes or rectangular ducts, it must be ensured that the ventilation system achieves at least the airtightness classification B with a maximum pressure limit of 200 Pascal and in classification C a limit of 1100 Pascal, according to EN 1507 (max. 2% leakage rate).

Ventilation systems with a higher leakage rate can cause blistering in the product.
